EDUCATION

Bachelor's program
Central University
Mathematics and
Computer Science
2024 - 2028

Secondary education
**Phystech Lyceum
named after P. L. Kapitsa**
Computer science class
2020 - 2024

LANGUAGES

English B2+
Oxford Placement Test
September 2024

ABOUT

Junior Java Backend Developer with over one year of experience. I work with Spring Boot, relational databases, Docker and CI/CD. I have developed server-side logic for web services and Telegram bots, contributed to architectural decisions and improved code quality. I collaborate with teams, debug issues and write clear, maintainable code.

EXPERIENCE

Central University

September 2024 - present

Developer

Contributed to the digital transformation of university educational processes. Developed automation solutions, learning platforms and bots to improve students' preparation.

Mock Interview Practice Bot

- **Developed the backend** of a scalable platform for algorithm, interview and coding-problem practice using Spring Boot, PostgreSQL and WebSocket. Added an admin panel to improve usability.
- **Created a Telegram bot** that manages mock interviews and users' time, evaluates participants and selects tasks for them.
- **Implemented head-to-head (PvP) competitions** tracking attempts, time and successful solutions.

Anti-Spam Bot

- **Set up the bot's structure and configuration:** created a service and configuration components to ensure correct bot registration and straightforward extension.
- **Prepared the foundation for anti-spam functionality:** designed an architecture for adding message filtering, moderation and rules without changing existing code.

Teaching Assistant

- Supported delivery of a software development course. Held consultations, reviewed student work and helped students learn tools and technologies.
- **Held consultations and walkthroughs** on application architecture, HTTP, debugging and writing high-quality code.
 - **Reviewed and graded student projects**, providing detailed feedback on implementation quality, style, structure, correctness and compliance with requirements.
 - **Helped students build practical skills:** development-environment setup, troubleshooting, correct use of Git, working with APIs and deployment.

SKILLS

MVC, SOLID, Clean Architecture
Java, Spring Boot, JDBC, Spring JPA, Python
Multithreading, Async I/O, Jenkins, CI/CD
Docker, PostgreSQL, JUnit, Hibernate, Flyway
Telegram Bot API, Spring Security, Kafka, Spring Scheduler
REST API, Swagger, CRUD, OAuth, JWT
Documentation, refactoring
Collaboration with backend and frontend teams
